BS 8005 provides guidance on planning, design, construction, operation, and a template for a domestic wastewater (wastewater) treatment plant to simplify design installation. Sewer Design Guide, 2013 Appendix 12 (Installation and building code guidelines for domestic wastewater treatment, 2013). Efficient sewerage systems: design and construction requirements, 2013 (pp. 91-92) 2.5. Design of a water disposal system based on treatment facilities for biological treatment of domestic wastewater The design of wastewater systems using biological treatment facilities involves the following: 1. Analysis of natural and technogenic pollution of waste and surface waters, preparation and development of a traffic pattern and operation mode of structures, determination of the possibility of preventing environmental pollution during operation and requirements for technical condition, development of technical solutions that determine the optimal combination of parameters of the structure, the use of advanced technologies treatment of waste, surface and other waters. 2.3. Development of a list of measures aimed at reducing the negative impact on the environment and reducing damage from

environmental pollution, which ensures safe, efficient and cost-effective construction of the system, technological readiness, as well as the possibility of its implementation in a short time.

Development of a project for the organization of construction and the order of commissioning of facilities for treatment and pumping plants, preparation of a project for the organization of work, carrying out work to find and provide initial data for design, development of a project for the organization of construction production, determining the volume and cost of construction work. Organization of the construction of the facility. Construction costs. Work organization projects.

Development prospects. Investment justification documents, including estimates and balances. Investment project (location scheme and main characteristics of structures, justification of investments, feasibility study of construction, design estimates).

Operating conditions of structures in which their emergency destruction is possible. Commissioning dates and maintenance schedule. Expected duration of normal operation. External impacts determined in the process of engineering and environmental surveys and environmental monitoring.

Substances planned for release into the environment that are introduced into the composition of waste or surface wastewater from industrial waters. Waste. Environmental monitoring during design and construction. Basic provisions for the designed wastewater treatment facility. How to develop a project organization
