## WallManager With Keygen

WallManager is a useful tool to change your Windows Desktop wallpaper without having to exit your favorite programs. You can easily drop your own pictures (jpg, png, tif, or gif) or folders over the application to add all pictures in them. You can also use the built-in browser-like interface to browse your pictures. Finally, the application monitors whether or not your wallpaper images are changing, and notifies you when the program can do its magic. **WallManager Setup:** After downloading WallManager, open the folder where you saved the archive and double-click on wallmanager.exe. The installation process should take only a few seconds, but you might notice some "encoding" errors after it finishes. You can close and restart the setup process if these errors appear. There shouldn't be much else to do. During the application's installation, you'll see instructions about what is required and how to reach the main configuration screen. To change the wallpaper, just go to the main screen, which has all the options. You can add new pictures as you normally would, and you can choose to have the wallpaper change when your Windows starts. Length: 20:34 Customer Reviews Rated 4 out of 5 by Optimus The right tool for the job This is a very simple to use and quick program. And as it is the alternative to Windows it is both a good solution when one is looking for a time-saving way of displaying a new background and also a tool for those that suffer from the annoyance of finding the correct wallpaper to display in their Windows or OS/X installations. Although Wall Manager is not available in the Mac OS version, an app called Wallch can be used and it is available for download here: It may not look as good as Wall Manager, but it will do the job. Add to this the fact that when installed it merely has to be run every time your desktop is loaded rather than requiring user action and you have something of interest. And the fact that it will revert to the original wallpaper after a few minutes of inactivity means that you can have other applications taking full use of your desktop without interference. This app is worth a look for those who, for whatever reason, find Windows or OS/X's functionality lacking. Rated 4 out of 5 by dave73 desktop manager Very good program - saves you having to browse to the desktop folder to find a new wallpaper.
